Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from Soy Beans and Secrets of Legume Inoculation During the past fourteen years, practical experience and observation has convinced me that the Soy bean is probably the best plant known at present to grow protein for domestic animals in what is known as the corn belt, and second only to clover as an agent to supply nitrogen to the soil - even this latter point may be contested, if we consider the comparative time each crop occupies the land, and are satisfied to remove and sell off the land as small a per cent, of the crop as we do of the clover. As compared with the cow pea, it is hardier, may be planted earlier in the season, and makes its full plant growth more quickly. One summer I planted a field with Early Brown Soy beans and New Era cow peas, mixing the seed together in the planter, expecting the cow peas to continue growing and making succulence after the beans were ripe. But instead, by the time they were six weeks old, the cow peas were nearly covered, and never made much showing. It grows more erect, matures its seed more evenly, and the seed is not subject to attacks of the bean weevil, while cow peas are sometimes entirely destroyed by this pest. It is far more productive of seed, and this seed contains about 50 per cent, more protein than cow peas. Its many varieties, ranging from very early to very late, makes its climatic range very great. Soil and Rotation It will thrive in any soil in which corn will grow. It can be made to enter nicely into rotation...
