

Synthesis & Characterization of ZnO Nanoparticles Hydrothermal Route

Filesize: 4.51 MB

Reviews

This publication is wonderful. I have got study and so i am confident that i am going to likely to read once again once more down the road. Its been designed in an exceedingly straightforward way which is only soon after i finished reading this ebook by which actually altered me, change the way i think.
(Woodrow Labadie)

SYNTHESIS & CHARACTERIZATION OF ZNO NANOPARTICLES HYDROTHERMAL ROUTE

LAP Lambert Academic Publishing Aug 2013, 2013. Taschenbuch. Book Condition: Neu. 220x150x7 mm. Neuware - The hydrothermal method has been used for the synthesis of ZnO nanoparticles with controlled morphology. In the present study, NaOH was used as a precipitating reagent, contributed to the formation of nanoplate morphology. Ultrafine particles, 50 nm in size, could be obtained. Compared with other methods, this technique avoids large concentration gradients and gives better control of the particle growth in chemical processing systems. As precipitation is carried out at a low concentration, agglomeration is reduced, while when the reactant concentration is high, a high particle number density results and agglomeration is observed. 116 pp. Englisch.
