

A Course in Mathematics, for Students of Engineering and Applied Science Volume N . 1

By Frederick Shenstone Woods

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 72 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1907 Excerpt: . . . suggests a method of finding the tangent to any curve represented by an equation of the second degree, the slope of the tangent being given. For if m of the required tangent is known, its equation may be written $y = mx + b$, where b is not known. According to the definition of a tangent, however, b must have such value that the points of intersection of straight line and curve shall be coincident. This condition enables us to determine b , as shown in the following examples. Ex. 1. Find the equation of the tangent to the parabola $3x^2 = 2y$, the slope of the tangent being 2. Since the slope of the tangent is 2, its equation may be written $y = 2x + b$. Substituting this value of y in the equation of the parabola, we have the equation $3x^2 = 4x + 2b$. Since the...
